

Lufkin-RMT's **Repair Services** Offer Increased Performance and Reduced Temperature for Your Turbomachinery Equipment.

To ensure your operation continues to run smoothly, Lufkin-RMT provides expert turbomachinery repair for the industrial air, power generation and oil and gas industries. Our decades of experience enables us to repair any make and model of cryogenic turboexpanders as well as most integral compressors used for air separation service. As further support, we offer field service to repair and maintain equipment at your facility and provide in-house engineering services to diagnose difficult vibration and operational problems. In case of plant outage situations, we also offer emergency turnaround services.

Before

After

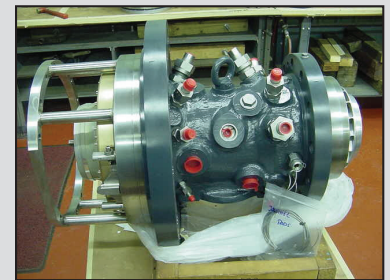

Experience • Precision • Quality

We know what it costs to have equipment out of service. More importantly, we know what it takes to repair it. Our facility in Wellsville, NY has the capacity to completely overhaul equipment such as turboexpanders, turbochargers and integrally geared compressors.

Lufkin-RMT is recognized as one of the best rotor balancing professionals. We perform a two-plane, dynamic balance that is ten times more accurate than the industry standard of 4 w/n divided by speed. Our capabilities include over speed testing up to 18" diameter or 60 lbs. We also oxygen clean, preserve and package Mission, Marlin and Powell check valves up to 32" diameter, as well as compressor and expander oil pumps. Lufkin-RMT has years of experience rebuilding planetary and radial gears, integrate guide vane assemblies, journal and seal areas on shafts.
